

Appl. No.: 10/691,803

Amdt. Date: May.22, 2006

Reply to: the Office Action of Feb. 22, 2006

**Amendments to the abstract**

Please replace the original abstract with the following amended one:

The socket connector assembly (20) comprises a socket connector (30), an IC package (40) mounted upon the socket connector, a heat sink (60) mounted above the IC package, an actuator (50, 50') detachably attached to the socket connector, a retention mechanism (70) mounted on the actuator and securing the heat sink on the actuator, and at least one latch (51, 51'). [[Said]] The at least one latch comprises a body (51a, 51a'). One end (51c) of the body is disposed on a part of the actuator. A latching portion (51b, 51b') is formed on the other end of the body, for being directly attached to a part of the socket connector. Thus [[said]] the at least one latch holds the actuator on the socket connector.
